

HOST ONBOARDING

1. Landing Page Same as all users. Options: • Log In • Create Account CTA: Create Account	
2. Role Selection Screen Title How will you use OpenClub? Options • Club Management • Promoter • Host User selects: Host	
3. Enter Activation Code / Link Screen Title Join a Venue Instruction Enter the activation code or link provided by your club. Input • Activation Code OR Invite Link Example: AURA-HOST-4832 CTAs • Continue • Secondary: Request Access	
4. Confirm Venue System validates code and shows: You are joining Club Aura Houston, TX Role: Host CTAs • Confirm • Back	
5. Create Host Account Fields: • First Name	

• Last Name • Phone Number • Email • Password Optional: • Profile Photo CTA: Create Account Quick Orientation (3 Screens Max) Hosts don't want training. Keep it fast. Screen 1 — Reservations View Tonight's Reservations See all bookings organized by time and section. Screen 2 — Check-In Check Guests In Mark guests as arrived when they enter. This notifies the floor. Screen 3 — Floor Control Manage the Floor Track section status in real time: • Available • Reserved • Seated CTA: Go to Dashboard	

HOST DASHBOARD

Updated Host Dashboard Add: Quick Actions Bar (Top) • Scan QR • Search Guest • Add Walk-In This is critical. Hosts operate under pressure—this reduces steps. QR Check-In Flow (Host Side) 1. Tap "Scan QR" Opens camera scanner (full screen) Overlay:	
--	--

“Scan guest QR code” 2. Scan Result System instantly pulls reservation: Example: Reservation Found Name: John Smith Section: B3 Package: Gold Time: 8:30 PM Status: Reserved 3. Host Actions Buttons: Check In (primary) Seat Guest View Details 4. After Check-In Status updates: Reserved → Arrived Triggers: • Section marked as active • Bottle staff notified (later feature) • Floor map updates to “occupied”	
Customer Side (QR Generation) Every confirmed reservation must generate: Unique QR Code This QR is: • Tied to reservation ID • Single-use or state-aware • Time-aware (valid for that night/event) Where QR Lives (Customer) • Confirmation screen • In-app reservation view • Confirmation email / SMS QR Behavior Rules (Important) 1. Status-Aware If already checked in: QR scan shows: Already Checked In Prevents double entry confusion. 2. Time Context If too early: “You’re early — check-in starts at 8:30 PM” If late:	

“Reservation is late — confirm with host”

3. Partial Party Handling

This is real-world critical.

If 6-person reservation → only 3 arrive:

Host should be able to:

Check in partially

or

Mark full arrival later

So QR should allow:

“Check in party” → flexible state

Offline / Edge Case Handling

You will run into this:

QR won't scan

Phone dead

Screenshot blurry

So ALWAYS allow fallback:

Search by:

- Name
- Phone

Never rely 100% on QR.

UX Detail That Matters

After scan → do NOT show a heavy screen.

Show a fast modal card:

John Smith

Section B3

Gold Package

[Check In] [Seat]

Fast, clean, minimal taps.

System Architecture (Behind the Scenes)

Each reservation has:

Reservation ID

User ID

Section ID

Package ID

Event ID (later)

QR Token

QR token maps to reservation.

Security Consideration

Do NOT use static QR codes.

Use:

- Encrypted token
- or
- Short-lived signed URL

Prevents duplication or fraud.

Optional (High Value, Not Required for V1) Dynamic QR (Animated) Prevents screenshots being reused. Used in airlines, events. Not required for V1, but powerful later.	
Host Permissions (Strict) Hosts can: • View reservations • Check in guests • Seat guests • Manage waitlist • View floor Hosts cannot: • Change pricing • Edit packages • Modify layout • Invite staff • Access financials
