

OpenClub Admin Panel

OpenClub is a SaaS nightlife infrastructure platform. The admin panel should not operate like an event agency or manual approval system. OpenClub should provide the software, controls, permissions, support tools, and reliability layer that allows clubs, promoters, hosts, door staff, bottle staff, and customers to operate smoothly without OpenClub being involved in every action.

The admin panel exists for:

- Platform oversight
- SaaS account management
- Emergency intervention
- Support and disputes
- Payments and payouts
- Permissions and role management
- Messaging infrastructure
- Entry reliability
- Operational continuity

The primary goal is simple:

People must be able to get in and out of clubs/events without hassle.

Analytics can come later. Reliability, access, and operational control come first.

1. Admin Home Dashboard

The admin dashboard should provide a high-level snapshot of platform operations.

Primary Dashboard Sections

Platform Activity

- Active clubs
- Active promoters
- Active events tonight
- Active section bookings

- Active GA passes
- QR scans completed
- Failed or suspicious scans
- Active support issues

Revenue Snapshot

- Total platform transaction volume
- Total booking fee revenue
- Total GA revenue
- Total SaaS subscription revenue
- Total payouts to clubs
- Total payouts to promoters
- Total payouts to bottle personnel
- Total refunds issued
- Pending payouts
- OpenClub retained revenue
- Platform fee revenue
- Failed payments
- Chargebacks

Admin should always be able to see:

1. Total money processed through OpenClub
2. What clubs/personnel receive
3. What promoters receive
4. What OpenClub keeps

Operational Alerts

- Events starting soon
- Events with no guestlist loaded
- Events with no floor map/section setup
- Clubs with unresolved support issues
- Duplicate scan spikes
- Payment or payout issues
- Platform health warnings

The admin dashboard should prioritize operational health over deep analytics.

2. Clubs Management

This section manages venue accounts across OpenClub.

Club Profile Should Include

- Club name
- Address
- City/market
- Venue capacity
- Operating nights
- Foundational Club Owner
- Club managers
- Subscription status
- Payment status
- Approval/account status
- Active events
- Promoters attached
- Door staff attached
- Host staff attached
- Bottle staff attached
- Floor map status

Admin Actions

- View club profile
 - Approve/suspend club account
 - Add/remove club users
 - Edit venue capacity
 - View events attached to the club
 - View club payments/payouts
 - View staff permissions
 - Upload or override floor map if needed
 - Resolve disputes tied to the club
-

3. Promoter Management

This section manages promoter accounts and their relationship to clubs/events.

Promoter Profile Should Include

- Promoter name
- Phone/email
- Clubs attached to
- Events attached to
- Guestlist activity
- Sections sold
- GA passes sold
- Referral links
- Payout status
- Account status
- Subscription status if applicable

Admin Actions

- Approve/suspend promoter account
 - Attach promoter to club
 - Remove promoter from club
 - View promoter events
 - View referral attribution
 - View payout activity
 - Resolve promoter disputes
 - Adjust account permissions
-

4. Event Management

This section gives OpenClub visibility into every event without making OpenClub the daily approval point.

Event Profile Should Include

- Event name
- Club
- Event owner
- Event date/time
- Time zone
- Status: Draft, Live, Ended, Cancelled
- GA enabled/disabled
- Sections enabled/disabled
- Booking fee settings
- Section minimum settings

- Guestlist status
- QR/PIN status
- Floor map/section status
- Revenue collected
- Refund/dispute status

Admin Actions

- View event details
- Edit event details if needed
- Cancel event in emergency
- Force publish/unpublish if necessary
- View guestlist
- View sections
- View referral attribution
- View scan logs
- View payment activity
- Resolve event issues

OpenClub should not be required to approve every event. Clubs and promoters should operate through permissions and account rules.

5. Section Inventory Control

Section management is one of OpenClub's core differentiators and should have strong admin visibility.

Section Data Should Include

- Club
- Event
- Section name/number
- Section capacity
- Booking fee
- Section minimum
- Availability status
- Assigned bottle staff
- Assigned promoter attribution
- Customer booking status
- Payment status

- Check-in status

Admin Actions

- Add/edit/remove sections
- Mark section available/unavailable
- Adjust booking fee
- Adjust section minimum
- Reassign section
- Move customer to another section
- Refund booking fee
- Override section issue

Section terminology should use **booking fee** and **section minimum**, not “price/minimum.”

6. Guest / CRM Oversight

This is not meant to be a heavy analytics CRM in V1. The main purpose is guest lookup, support, and access continuity.

Guest Profile Should Include

- Guest name
- Phone number
- Email if available
- Tags
- Favorite status
- Upcoming passes
- Active QR codes
- PIN code
- Section bookings
- Event attendance history
- Referral source

Admin Actions

- Search guest
- View active passes
- View QR/PIN details

- Reissue pass
 - Cancel pass
 - Merge duplicate profiles
 - Flag account
 - Resolve support issue
-

7. QR, PIN, and Entry Logs

This is one of the most important parts of the platform.

OpenClub's reputation depends on people getting into events smoothly.

Entry Log Should Show

- Event
- Guest
- Pass type
- QR status
- PIN status
- Scan time
- Scanned by
- Entry result
- Duplicate scan status
- Re-entry status
- Suspicious activity flag

Entry Rules

- Valid QR scan should auto-admit
 - Duplicate scans under 15 minutes should be flagged as suspicious
 - Re-entry after 15 minutes should auto-allow
 - Door, host, or approved staff should be able to scan
 - Entry should be role-agnostic where appropriate
 - Staff should be able to search by name, phone, or PIN if QR fails
-

8. Referral and Attribution Engine

Referral and attribution must be transparent because money, trust, and promoter relationships depend on it.

Referral Data Should Include

- Foundational referral link per person
- Event-specific referral links
- Clicks
- GA conversions
- Section conversions
- Revenue generated
- Attribution owner
- Split rules
- Conflicting attribution cases

Core Rule

Each promoter, bottle staff member, or approved nightlife persona should have a foundational referral link.

That link should take users to their profile page showing relevant events, nights, GA passes, and sections.

Event-specific links should only be created when that person is attached to a specific event.

A new link should not be generated for every regular club night unless there is a specific event-based reason.

Admin Actions

- View referral links
- Reassign attribution
- Resolve attribution disputes
- Disable bad links
- View referral path
- Export attribution report

9. Payments, Payouts, and Revenue Splits

This section manages money movement and platform trust.

Admin must always have a clear top-down revenue view of the entire platform.

Platform Revenue Visibility

Admin should always be able to see:

Overall Revenue

- Total transaction volume
- Total booking fee revenue
- Total GA revenue
- Total section-related revenue
- Total SaaS subscription revenue

Revenue Distribution

- Total payouts to clubs
- Total payouts to promoters
- Total payouts to bottle personnel
- Total refunds
- Total chargebacks
- Pending payouts

OpenClub Revenue

- Platform fee revenue
- SaaS revenue
- OpenClub retained revenue
- Net OpenClub earnings

The admin panel should make it extremely clear:

- what the platform processed
- what was paid out
- what OpenClub keeps

Payment Data Should Include

- Gross revenue
- Booking fee revenue
- GA revenue
- Platform fees

- SaaS subscription revenue
- Club payout
- Promoter payout
- Bottle staff payout
- Refunds
- Chargebacks
- Failed payments
- Pending payouts

Admin Actions

- View transaction history
- View processor transaction ID
- Approve payout
- Hold payout
- Adjust payout
- Issue refund
- Handle dispute
- Export payout report

This section is critical because payout confusion will quickly become one of the biggest operational risks.

10. Subscription / SaaS Billing

Since OpenClub is a SaaS product, billing management must be built into the admin panel.

Subscription Types

Club Subscription

- Monthly SaaS plan
- Future tiered pricing support

Promoter Subscription

- Monthly SaaS plan
- Future tiered pricing support

Admin Should Manage

- Active subscriptions
 - Failed payments
 - Trials
 - Cancellations
 - Upgrades
 - Downgrades
 - Comped accounts
 - Billing history
 - Invoices
-

11. User Roles and Permissions

Permissions are more important than manual approvals.

The system should allow clubs and promoters to operate independently while keeping operational control clear.

Roles

- OpenClub Admin
- Foundational Club Owner
- Club Manager
- Foundational Promoter
- Promoter
- Host
- Door Staff
- Bottle Staff
- Customer

Permission Structure

Foundational Club Owner

Has full control over:

- Club management
- Event permissions

- Section permissions
- Booking fee permissions
- Section minimum permissions
- Messaging permissions
- Staff assignment
- Manager assignment
- Role permissions

Can assign:

- Club managers
- Door staff
- Hosts
- Bottle personnel
- Club-level permissions

Foundational Promoter

Has full control over:

- Promotion group
- Promoter staff
- Event permissions tied to their events
- Messaging permissions tied to their guestlists
- Referral permissions

Can assign:

- Promoter staff
- Promotion group permissions

Club Managers

Only see and control permissions explicitly granted to them.

Possible permissions:

- Section booking fee changes
- Section minimum changes
- Event edits
- Messaging access
- Guestlist access
- Staff management
- Refund permissions

If a user is not manager-level or ownership-level:

- they should not see financial controls
- they should not see pricing controls
- they should not see payout visibility
- they should not see operational permissions

Most staff should only see the functionality required for their role.

12. Floor Map Admin

The floor map is central to OpenClub's product value.

Floor Map Should Support

- Club floor layout
- Section placement
- Section labels
- Section capacity
- Booking fee
- Section minimum
- Availability status
- Assigned staff
- Customer booking status

Section Statuses

- Available
- Booked
- Held
- Unavailable
- Checked in
- Needs attention

Admin Actions

- View floor map
- Edit floor map
- Add/edit/remove sections
- Override section status
- Resolve section booking issues

13. Messaging / Push Notification System

OpenClub should not be the final approval point for normal user messaging.

This is a SaaS product. Clubs, promoters, and bottle personnel should fully control communication with their own guests using preconfigured messaging templates.

The only messaging requiring admin approval should be platform-wide push notifications.

Core Philosophy

OpenClub provides:

- Messaging infrastructure
- Preconfigured templates
- Delivery systems
- Permission systems
- Platform-wide messaging moderation

OpenClub does not manually approve normal nightlife messaging.

Messaging Permissions

Club Owners

Can message:

- Entire club guestlist
- Club followers
- Event attendees tied to their club
- Club section guests

Examples:

- Event reminders
- VIP announcements
- Last-minute section pushes

- Holiday/event campaigns
- Venue updates

Club Owners control club-wide communication.

Promoters

Can message:

- Entire promotion group guestlist
- Their followers
- Their event attendees
- Their attributed customers

If attached to an event with a club:

- they can also message guests tied to that event

Examples:

- Pull-up reminders
 - Guestlist reminders
 - Free GA pushes
 - Event marketing
 - Last-minute section availability
-

Bottle Personnel

Can message:

- Their guestlist
- Assigned section groups
- Assigned table guests

Examples:

- “Your section is ready 🍷”
- Arrival reminders
- Section updates
- Upsell offers

Bottle personnel messaging should remain tied to their own customer relationships.

Door Personnel

Door personnel should have:

- no messaging permissions

Their role is operational only.

Host Messaging

Hosts should have minimal messaging permissions.

Can send:

- Arrival reminders
- Section ready notifications
- Check-in updates

Hosts should not have broad marketing access.

Preconfigured Message Templates

The system should primarily use editable templates rather than unrestricted free-form mass messaging.

Examples:

- “{EventName} starts in 2 hours 🎉”
 - “Your section at {ClubName} is ready 🍾”
 - “Free GA is still available tonight.”
 - “Last-minute sections just opened up.”
-

Platform-Wide Push Notifications

Only OpenClub Admin can send platform-wide push notifications.

Platform-wide notifications should require admin approval before sending.

Admin Can Message

- Entire OpenClub user base
- Entire customer base
- Entire promoter base
- Entire club base
- Entire operational staff base
- City-specific audiences

Examples:

- App updates
 - Platform announcements
 - Feature launches
 - Service alerts
 - City-wide nightlife campaigns
 - Holiday/event pushes
-

14. Support / Dispute Center

This should be built around fast issue resolution.

Support Categories

- Guest cannot find pass
- QR not scanning
- PIN not working
- Duplicate scan issue
- Wrong section booked
- Refund request
- Event cancelled
- Promoter attribution dispute
- Club payout dispute

- Customer charged incorrectly
- Staff permission issue

Admin Actions

- Reissue QR
 - Confirm PIN
 - Cancel pass
 - Refund payment
 - Move section
 - Override scan result
 - View event logs
 - View payment logs
 - Add internal note
 - Escalate issue
-

15. Platform Health and Reliability

This should replace heavy analytics as an early priority.

OpenClub must be reliable during nightlife hours.

The platform cannot have issues at midnight when customers are trying to enter clubs and events.

The system must always provide a way for guests and section bookers to access events even if the app or servers are experiencing issues.

Core Product Principle

OpenClub must always degrade gracefully.

If something breaks, entry flow must still work.

The app can sacrifice nonessential features before sacrificing access.

Priority Systems During Outage or Heavy Load

Highest priority:

- Authentication
- QR validation
- PIN validation
- Guestlist access
- Section ownership verification
- Entry status
- Staff scanning

Lower priority:

- Analytics
 - Recommendation engine
 - Nonessential dashboards
 - Marketing pushes
 - Cosmetic UI updates
-

16. Offline and Backup Access Requirements

This is a critical requirement.

OpenClub should not rely on live internet access alone.

Offline QR Validation

Door/host devices should cache active event data before the event starts.

Cached data should include:

- Guestlist
- QR tokens
- PIN codes
- Section bookings
- Assigned sections
- Recent scans
- Event details

If Wi-Fi or cellular service drops, staff should still be able to admit guests.

Backup PIN System

Every customer should have:

- QR code
- PIN code
- Name lookup
- Phone lookup

This protects against:

- QR scan failure
- Low brightness
- Broken screens
- Network delay
- App loading issues

Local Scan Storage

If scans happen during degraded service, the app should:

- Store scans locally
- Mark guests as admitted locally
- Sync automatically when service returns
- Prevent duplicate check-in confusion

Emergency Venue Mode

Each event should support emergency backup access.

Emergency mode should include:

- Downloadable guestlist
- Printable guestlist
- Manual PIN verification
- Manual section verification
- Staff override access

This is not flashy, but it is necessary for real-world nightlife operations.

17. Settings and Platform Rules

The admin panel should control global defaults.

Global Settings

- Platform fee percentage
 - Booking fee rules
 - Refund policy
 - Cancellation rules
 - Re-entry rules
 - QR expiration rules
 - PIN rules
 - Payout timing
 - Subscription pricing
 - Staff permission defaults
 - Messaging permissions
 - Notification templates
 - Support escalation rules
-

Recommended V1 Admin Navigation

For V1, keep the admin panel focused.

1. Dashboard
 2. Clubs
 3. Promoters
 4. Events
 5. Sections
 6. Guests
 7. Payments
 8. Messaging
 9. Scans & Entry Logs
 10. Support
 11. Platform Health
 12. Settings
-

V1 Priority

Do not overbuild analytics yet.

The first version should focus on:

- Clubs can operate
 - Promoters can operate
 - Events can go live
 - Sections can be booked
 - Guests can access passes
 - Door staff can scan quickly
 - Payments are tracked
 - Payouts are visible
 - Push notifications can be sent
 - Support can resolve issues
 - Platform does not break during peak hours
 - Guests still get in even during app/server issues
-

Final Product Positioning

The OpenClub Admin Panel is not just a backend dashboard.

It is the operational trust layer of the platform.

It protects:

- Access
- Payments
- Permissions
- Event operations
- Club trust
- Promoter trust
- Guest experience
- Platform reliability

The real product promise is:

OpenClub helps nightlife operators sell, manage, and control access without chaos.
